

SepWild project DMP

Plan de gestion de données créé à l'aide de DMP OPIDoR, basé sur le modèle "ANR - unstructured template" fourni par Agence nationale de la recherche (ANR).

Plan Details

Plan title	SepWild project DMP		
Deliverable			
Version	First version		
Plan purpose/scope	This plan aims at stating on the type of data produced by SepWild project and planning their valorization and archiving in public repositories to comply with FAIR principles. It is not a formal deliverable nor a requirement of any type. It will be shared as a project output and available on the project's GitHub repository to ensure transparency. At the end of the project, the plan will receive a DOI.		
Fields of science and technology (from OECD classification)	Biological sciences		
Language	eng		
Creation date	2026-09-25

Project Details

Project title	Thomas's Plan
Acronym	SepWild
Abstract	SepWild is a project funded by the French region Nouvelle-Aquitaine from March 2026 to March 2027. The full name of the project is : "Transcriptional response of cuttlefish juveniles to nursery quality in the Bay of Biscay".
Start date	2026-03-01
End date	2027-02-28

1. RO SepWild - Colorimetrically measured total DNA methylation (Dataset)
2. RO SepWild - Measurements of metal concentration in digestive gland (Dataset)
3. RO SepWild - Sclerochronology (Dataset)

SepWild project DMP

RO SepWild - Colorimetrically measured total DNA methylation

1. Data description and collection or re-use of existing data

1a. How will new data be collected or produced and/or how will existing data be re-used?

The data will be produced from optic lobes, gills and muscles of juvenile cuttlefish sampled during July 2026 in Arcachon basin, France, and the North-East coast of Oleron Island, France. DNA will be extracted from tissues previously fast frozen in liquid nitrogen, then stored at -80°C, using the E.Z.N.A. mollusc and insect DNA kit (Omega bio-tek). After quality check, total DNA methylation will be measured using the Global DNA Methylation Assay Kit (5 Methyl Cytosine, Colorimetric) (Abcam).

1b. What data (for example the kind, formats, and volumes), will be collected or produced?

The produced data will consist in a unique raw data file in interoperable format - probably .csv or .tsv - containing measurements of fluorescence corresponding to the proportion of methylated DNA within each sample.

2. Documentation and data quality

2a. What metadata and documentation (for example the methodology of data collection and way of organising data) will accompany the data?

A metadata file will accompany the datafile, specifying the date and localisation of sampling, the storage conditions, the operator and any other relevant information needed to easily understand the way data are structured. The detailed methods used to produce the data will be specified in the related publication.

3. Storage and backup during the research process

3a. How will data and metadata be stored and backed up during the research?

During the research process, data will be stored on the personal computers of Thomas Lacoue-Labarthe and Thomas Sol Dourdin. A copy will also be made on an external hard drive.

3b. How will data security and protection of sensitive data be taken care during the research

This research will not imply sensitive data.

4. Legal and ethical requirements, code of conduct

4a. If personal data are processed, how will compliance with legislation on personal data and on security be ensured?

No personal data

4b. How will other legal issues, such as intellectual property rights and ownership, be managed? What legislation is applicable?

During the research process, the intellectual property rights and ownership of data and code will be attributed to the LIENSs laboratory.

After publication of the related paper, data and code will be available in open access under the CC-BY-40 licence.

4c. What ethical issues and codes of conduct are there, and how will they be taken into account?

No ethical issues.

5. Data sharing and long-term preservation

5a. How and when will data be shared? Are there possible restrictions to data sharing or embargo reasons?

Data will be shared after the publication of the related paper. They will be made available in open access under CC-BY-40 licence in adequate public repository. The repository still has to be defined.

5b. How will data for preservation be selected, and where data will be preserved long-term (for example a data repository or archive)?

Data will be shared after the publication of the related paper. They will be made available in open access under CC-BY-40 licence in adequate public repository. The repository still has to be defined.

5c. What methods or software tools are needed to access and use data?

Since data will be shared in interoperable format, virtually any software is expected to be useful to use the data.

5d. How will the application of a unique and persistent identifier (such as a Digital Object Identifier (DOI)) to each data set be ensured?

The production of DOI will be ensured by the archiving in relevant open repository. It is not stated yet if the data set will be archiving independently or as whole - hence if there will be one DOI for each data set or one DOI for the whole.

6. Data management responsibilities and resources

6a. Who (for example role, position, and institution) will be responsible for data management (i.e. the data steward)?

Thomas Sol Dourdin, as post-doc on the SepWild project at La Rochelle University, will be responsible for data management.

6b. What resources (for example financial and time) will be dedicated to data management and ensuring that data will be FAIR (Findable, Accessible, Interoperable, Re-usable)?

Since DMP is not a deliverable nor a requirement from the funder, no resources are formally dedicated to data management. It will be done as part of Thomas Sol Dourdin's post-doc contract.

RO SepWild - Measurements of metal concentration in digestive gland

1. Data description and collection or re-use of existing data

1a. How will new data be collected or produced and/or how will existing data be re-used?

The data will be produced from digestive gland of juvenile cuttlefish sampled during July 2026 in Arcachon basin, France, and the North-East coast of Oleron Island, France. The metal concentration in digestive glands stored at -20°C will be measured at the LIENSs platform for elemental analyses (UMR 7266, CNRS, La Rochelle Université), under scientific supervision of Thomas Lacoue-Labarthe and technical supervision of Maud Brault Favrou et Carine Churlaud. Total mercury will be measured by atomic absorption using an Advanced Mercury Analyzer by Altec. The other metals will be measured by ICPMS (X série 2 - Thermofisher Scientific) or ICPAES (5800 VDV - Agilent Technologies).

1b. What data (for example the kind, formats, and volumes), will be collected or produced?

The produced data will consist in a unique raw data file in interoperable format - probably .csv or .tsv - containing measurements of metal concentrations per individual.

2. Documentation and data quality

2a. What metadata and documentation (for example the methodology of data collection and way of organising data) will accompany the data?

A metadata file will accompany the datafile, specifying the date and localisation of sampling, the storage conditions, the operator and any other relevant information needed to easily understand the way data are structured. The detailed methods used to produce the data will be specified in the related publication.

3. Storage and backup during the research process

3a. How will data and metadata be stored and backed up during the research?

During the research process, data will be stored on the personal computers of Thomas Lacoue-Labarthe and Thomas Sol Dourdin. A copy will also be made on an external hard drive.

3b. How will data security and protection of sensitive data be taken care during the research

This research will not imply sensitive data.

4. Legal and ethical requirements, code of conduct

4a. If personal data are processed, how will compliance with legislation on personal data and on security be ensured?

No personal data

4b. How will other legal issues, such as intellectual property rights and ownership, be managed? What legislation is applicable?

During the research process, the intellectual property rights and ownership of data and code will be attributed to the LIENSs laboratory.

After publication of the related paper, data and code will be available in open access under the CC-BY-40 licence.

4c. What ethical issues and codes of conduct are there, and how will they be taken into account?

No ethical issues.

5. Data sharing and long-term preservation

5a. How and when will data be shared? Are there possible restrictions to data sharing or embargo reasons?

Data will be shared after the publication of the related paper. They will be made available in open access under CC-BY-40 licence in adequate public repository. The repository still has to be defined.

5b. How will data for preservation be selected, and where data will be preserved long-term (for example a data repository or archive)?

Data will be shared after the publication of the related paper. They will be made available in open access under CC-BY-40 licence in adequate public repository. The repository still has to be defined.

5c. What methods or software tools are needed to access and use data?

Since data will be shared in interoperable format, virtually any software is expected to be useful to use the data.

5d. How will the application of a unique and persistent identifier (such as a Digital Object Identifier (DOI)) to each data set be ensured?

The production of DOI will be ensured by the archiving in relevant open repository. It is not stated yet if the data set will be archiving independently or as whole - hence if there will be one DOI for each data set or one DOI for the whole.

6. Data management responsibilities and resources

6a. Who (for example role, position, and institution) will be responsible for data management (i.e. the data steward)?

Thomas Sol Dourdin, as post-doc on the SepWild project at La Rochelle University, will be responsible for data management.

6b. What resources (for example financial and time) will be dedicated to data management and ensuring that data will be FAIR (Findable, Accessible, Interoperable, Re-usable)?

Since DMP is not a deliverable nor a requirement from the funder, no resources are formally dedicated to data management. It will be done as part of Thomas Sol Dourdin's post-doc contract.

RO SepWild - Sclerochronology

1. Data description and collection or re-use of existing data

1a. How will new data be collected or produced and/or how will existing data be re-used?

Data will be produced from statolith of juvenile cuttlefish sampled during July 2026 in Arcachon basin, France, and the North-East coast of Oleron Island, France. Ageing will be performed by Elodie Réveillac (associate professor at La Rochelle University) using equipment for sclerochronology available at LIENSs (UMR 7266, CNRS, La Rochelle University).

2. Documentation and data quality

2a. What metadata and documentation (for example the methodology of data collection and way of organising data) will accompany the data?

A metadata file will accompany the datafile, specifying the date and localisation of sampling, the storage conditions, the operator and any other relevant information needed to easily understand the way data are structured. The detailed methods used to produce the data will be specified in the related publication.

3. Storage and backup during the research process

3a. How will data and metadata be stored and backed up during the research?

During the research process, data will be stored on the personal computers of Thomas Lacoue-Labarthe and Thomas Sol Dourdin. A copy will also be made on an external hard drive.

3b. How will data security and protection of sensitive data be taken care during the research

This research will not imply sensitive data.

4. Legal and ethical requirements, code of conduct

4a. If personal data are processed, how will compliance with legislation on personal data and on security be ensured?

No personal data

4b. How will other legal issues, such as intellectual property rights and ownership, be managed? What legislation is applicable?

During the research process, the intellectual property rights and ownership of data and code will be attributed to the LIENSs laboratory.

After publication of the related paper, data and code will be available in open access under the CC-BY-40 licence.

4c. What ethical issues and codes of conduct are there, and how will they be taken into account?

No ethical issues.

5. Data sharing and long-term preservation

5a. How and when will data be shared? Are there possible restrictions to data sharing or embargo reasons?

Data will be shared after the publication of the related paper. They will be made available in open access under CC-BY-40 licence in adequate public repository. The repository still has to be defined.

5b. How will data for preservation be selected, and where data will be preserved long-term (for example a data repository or archive)?

Data will be shared after the publication of the related paper. They will be made available in open access under CC-BY-40 licence in adequate public repository. The repository still has to be defined.

5c. What methods or software tools are needed to access and use data?

Since data will be shared in interoperable format, virtually any software is expected to be useful to use the data.

5d. How will the application of a unique and persistent identifier (such as a Digital Object Identifier (DOI)) to each data set be ensured?

The production of DOI will be ensured by the archiving in relevant open repository. It is not stated yet if the data set will be archiving independently or as whole - hence if there will be one DOI for each data set or one DOI for the whole.

6. Data management responsibilities and resources

6a. Who (for example role, position, and institution) will be responsible for data management (i.e. the data steward)?

Thomas Sol Dourdin, as post-doc on the SepWild project at La Rochelle University, will be responsible for data management.

6b. What resources (for example financial and time) will be dedicated to data management and ensuring that data will be FAIR (Findable, Accessible, Interoperable, Re-usable)?

Since DMP is not a deliverable nor a requirement from the funder, no resources are formally dedicated to data management. It will be done as part of Thomas Sol Dourdin's post-doc contract.
